

IRTM Assignment 3

Task 5) Stop words are not in the index when using stop word list, which means information is lost. On the other side we can still search for any terms by using IDF and TF without having the problem that our ~~stop words~~ ^{are} most frequent terms are the most important ones. ~~because idf score~~ (because of the logarithm in the idf-formula). ~~However~~ when using stop word lists we can save memory ^{and processing time} when creating our index or ~~querying~~ when querying.
